LIQUID MagicSeal™ INSTRUCTIONS FOR DTF, WHITE TONER TRANSFER & MORE

1 Image Printing & Transferring

Print your design using DTF, Sublimation, White Toner Transfer, Direct to Garment, or another textile printing method.

For DTF: Add DTF powder, cure, and heat press the transfer sheet onto the apparel with a protective sheet (such as Teflon)

For Other Printing Technologies: Print Directly to the apparel (such as with DTG), or Heat press the transfer sheet onto the apparel (such as with White Toner) with a protective sheet on top.

2 Apply the Liquid MagicSeal™

Mist Liquid MagicSeal™ onto the printed design on your apparel, from about 10" away, ensuring light, even coverage (2-3 sprays for larger designs, 1-2 for smaller ones)

3 Second Press

Heat press the apparel for 15 seconds with a protective sheet to seal and enhance durability.

Benefits: • Improved Hand Feel • Improved Breathability

• For manual-powdering DTF processes, you can use up to 40% less powder and save up to 40% on your post-print production time by following our "Manual DTF" instructions instead
